next generation fasteners

PERFIX® is a new patented fastener system specifically developed for marine covers and sprayhoods.

No Sharp Pins on Deck:

PERFIX® does not involve protruding pins, sharp parts or other hazardous obstacles on deck. PERFIX® has smooth, round fixing points which prevent injury, cloth damage or snagged ropes and cords.

Perfect fixing grip & easy release under ALL conditions:

A special grip design means that you can easily attach PERFIX® to the fixing points: simply press the two together and the PERFIX® clicks when it is secure. Even with cold and wet fingers, the marine covers can easily be released from the PERFIX® fixing points, thanks to the perfect grip of the lifting head. PERFIX® combines the separate steps of hooking and securing in just one simple action. The result is a unique connection, which can be fixed and released as easily as a press stud. But it won't pop loose!

Push to fix

Pull to release

Durable and corrosion free:

Each individual part of PERFIX® is made of the highest quality glass fibre reinforced UV stabilised nylon, with a 316 stainless steel spring making the PERFIX® tough and durable.

Problem-free switch-over to PERFIX®:

PERFIX® can easily replace most other fasteners using the existing holes on both deck and cover. With the handy tool provided, you can remove the old fasteners and replace them with PERFIX®.....it's as simple as that!

PERFIX® in Sparkling White

PERFIX® in Captain Blue

PFX9900	Tool Kit - Combination of Perfix® Tools	10 x Installation pins 1 x Perfix® tool 1 x Drill Positioning Template	£14.98	£17.60	

Installing PERFIX® Buttons

The buttons are fitted through a 13mm DIA hole in the fabric and fitted using the PERFIX® Key.

Note the orientation of the hook indicator on the button. When the fabric is taken off at $>20^\circ$ the hook must be in the direction of the tensile pull as shown.

Installing PERFIX® Cloth to Cloth Receivers

Punch a 13mm Dia hole in the fabric and fit the receiver component using the PERFIX® Key.

Installing PERFIX® Screw Receivers

Drill a 3 to 3.4mm Dia hole in the deck/surface and screw the receiver to the surface. M4 Flathead countersunk bolts can also be used. Seek advice when drilling into special materials.

Installing PERFIX® Buttons to the Fabric when the receivers are in place

This would be typical when a cover is being replaced using existing fixing points, or when existing fixing systems are being replaced with PERFIX®. In this case the PERFIX® Installation pin is positioned over the receiver, as shown, to locate the Button.

Installing PERFIX® Receivers when the Buttons are in place

This would be typical when an existing cover is being refitted or an existing fitting is being replaced with PERFIX®. In this case the fixing point is located using the PERFIX® drilling stencil as shown.

Installing PERFIX® in thicker fabrics:

PERFIX® can be fitted to fabrics up to 4mm in thickness by adapting the standard fittings by sanding down the base of the button component as shown.
